

PROFESSIONAL EXPERIENCE

Junior Software Developer/Intern Mega Food Equipment— April 2026 - June 2026

- Built a PHP and MySQL-based product scraping system to automate conversion of supplier product data into a Shopify-ready format that improved product import time by 93%.
- Analyzed supplier website HTML structures and product datasets to design and implement reliable data extraction logic.
- Collaborated with a teammate to troubleshoot, debug, and improve application stability.
- Managed version control, database administration, and technical documentation using Git, phpMyAdmin, and Joplin throughout development.

Jean Coutu Cashier/Floor Clerk — February 2023 - August 2024

- Provided service to customers, solved issues, and kept inventory.
- Maintained and organized a clean workstation.
- Stocked and organized shelves, as well as the storage room.
- Worked alongside other departments to ensure quality customer service

EDUCATION

New Brunswick Community College — Moncton, New Brunswick Sep 2024 – June 2026

Information Technology: Software Development

PROJECTS

MegaScoop Software Development Practicum, Mega Food Equipment

PHP, MySQL, JavaScript, HTML, CSS, Git · Team Of 3

- Reduced product import time by 93% (30 min → 2 min) by building an automation tool that scrapes supplier data, downloads images, and generates Shopify-ready import files for 2,000+ products across 3 suppliers
- Refactored a monolithic single-supplier scraper into an OOP architecture (BaseScraper, ScraperInterface, ScraperFactory); built the Atosa product scraper to handle inconsistent HTML structures across product pages
- Designed and maintained the MySQL schema across 4 major versions, including a dual-table active/archive architecture, with backward-compatible migration scripts for each release

Chau Haus — Restaurant Management System Coursework Project

Java, Spring Boot, Spring Data JPA, MySQL, REST API, Thymeleaf, Maven, GitHub,

Jira · Team Of 2

- Built a full-stack Java web app using Onion Architecture (controllers, services, repositories, MySQL) to centralize restaurant reservations, seating, menus, and events for customers and staff
- Implemented full CRUD for Events and Menu/Menu Item management — REST endpoints, business logic, Bean Validation, DTO mapping, and Thymeleaf views — using JPA entity relationships to maintain referential integrity across menus and menu items
- Designed and built the public-facing homepage and site navigation as the primary customer entry point for browsing events and submitting reservations
- Collaborated with a teammate via GitHub and Jira, dividing ownership by feature area (Events/ Menus/Homepage vs. Reservations/Seating/email notifications)

SKILLS

Languages

English

Tech Stack

C#, Java, JavaScript, TypeScript, PHP, HTML, CSS, React.js, Node.js, Angular CLI, SQL, NoSQL, Git, GitHub

Other

Team collaboration, organized, punctual, self-starter, attention to detail, problem-solving, communication
